

Audience Behavior Report

Viewer Segmentation, Engagement Patterns & Preference Analysis — Q1 2025

Document Type:	Audience Intelligence Report
Prepared:	April 5, 2025
Authors:	Audience Intelligence & Data Science Team
Version:	1.2
Classification:	CONFIDENTIAL — Internal Use Only

1. Executive Summary

This report analyses the behaviour of StreamVault's **1,200 tracked viewer panel** across 13,708 watch events and 5,517 reviews recorded in Q1 2025. Key findings include a strong skew toward 25–35-year-old viewers, Smart TV as the dominant device for long-form content, and a pronounced preference for Sci-Fi and Drama among Premium-tier subscribers. Comedy affinity is measurably lower across all demographic segments.

1,200 Viewer Panel Size 20 cities, 8 countries	13,708 Total Watch Events (Q1) ~11.4 per viewer	5,517 Reviews Submitted 45% review participation	74.3% Platform Avg Completion +3.1 pp vs Q1 2024
---	--	---	---

2. Viewer Demographics

The viewer panel skews toward young adults with a median age of 32. Male and female viewers are near-equally represented at 45% each. Non-binary viewers account for 6%. India is the dominant geography at 58% of panel viewers, reflecting both platform market focus and strong organic growth in Tier-1 Indian cities.

Age Band	% of Panel	Avg Views/Month	Dominant Genre	Avg Rating Given
16–24	18%	9.2	Action, Comedy	3.9
25–34	38%	13.1	Sci-Fi, Thriller	4.1
35–44	28%	11.8	Drama, Documentary	4.2
45–54	11%	9.4	Drama, Romance	4.3
55–65	5%	7.1	Documentary, Drama	4.4

The 25–34 age cohort is the platform's most valuable segment: highest views per month (13.1), strong Sci-Fi affinity (which is the highest-ROAS genre), and average ratings that are reliable predictors of broader audience reception.

3. Subscription Tier Behaviour

Tier	% Panel	Avg Views/Month	Completion Rate	Review Rate	Rewatch Rate
Premium	15%	16.4	81.2%	58%	21%
Standard	30%	12.8	76.3%	48%	16%
Basic	25%	9.1	71.4%	38%	12%
Free	30%	5.3	61.8%	28%	7%

Premium viewers complete 19.4 percentage points more of each title compared to Free viewers. This completion gap represents real revenue opportunity: a 5% shift of Free viewers to Basic tier would add approximately \$630K annually at current ARPU.

4. Genre Preference by Audience Segment

Genre affinity is measured as the share of that segment's watch events attributed to each genre, indexed against the platform average (1.0 = platform average). Values above 1.2 indicate strong affinity; below 0.8 indicates low affinity.

Genre	16–24	25–34	35–44	45–54	55–65	Premium	Standard/Basic
Sci-Fi	1.1	1.5	1.2	0.9	0.7	1.6	1.1
Action	1.4	1.2	1.0	0.8	0.5	1.1	1.3
Drama	0.8	1.1	1.4	1.5	1.6	1.3	1.0
Thriller	1.0	1.2	1.1	1.0	0.9	1.2	1.0
Romance	1.1	0.9	0.8	1.1	1.2	0.7	1.0
Comedy	1.2	0.7	0.6	0.7	0.6	0.5	0.9
Documentary	0.5	0.8	1.1	1.3	1.8	1.1	0.7

Comedy scores below 0.8 affinity index across all segments aged 25 and above. Even among 16–24-year-olds — its strongest demographic — Comedy sits at only 1.2, compared to Action's 1.4 in the same cohort. This data reinforces the commissioning pause decision outlined in the Content Roadmap.

5. Device & Platform Usage Patterns

Smart TV usage has grown from 29% in Q1 2024 to 35% in Q1 2025, driven by increased penetration of streaming-enabled televisions and StreamVault's TV app improvements shipped in September 2024. Mobile viewing is concentrated among 16–34-year-olds and international markets with lower Smart TV penetration.

Device	Share Q1 2025	Avg Session (min)	Completion Rate	Primary Age Band
Smart TV	35%	94.2	82.1%	35–54
Mobile	30%	41.8	64.3%	16–34
Laptop	20%	68.4	74.1%	25–44
Tablet	10%	72.6	76.8%	35–54
Desktop	5%	55.3	70.2%	25–44

Smart TV sessions are 125% longer than Mobile sessions and achieve 17.8 percentage points higher completion rates. This reinforces the recommendation to prioritise Smart TV app performance in Q2 engineering sprints.

6. Temporal Viewing Patterns

Peak viewing hours are 8–11 PM local time, accounting for 52% of all daily sessions. Weekend viewership is 38% higher than weekdays on a per-day basis. January and February saw the strongest monthly volumes in Q1, boosted by Stellar Run's launch and post-holiday audience availability.

Time Slot	% of Daily Views	Dominant Device	Top Genre
06:00–09:00	8%	Mobile	Documentary, News
09:00–12:00	6%	Laptop	Drama
12:00–15:00	10%	Mobile	Action, Comedy
15:00–18:00	12%	Tablet	Action, Sci-Fi
18:00–21:00	22%	Smart TV	Sci-Fi, Drama
21:00–24:00	30%	Smart TV	Thriller, Drama
00:00–03:00	8%	Mobile	Thriller, Sci-Fi
03:00–06:00	4%	Mobile	Drama, Documentary

7. Review Sentiment Analysis

Of the 5,517 reviews submitted in Q1 2025, 61% were classified as Positive, 24% as Neutral, and 15% as Negative. Sentiment distribution varies significantly by genre. Comedy titles generated a disproportionate share of Negative reviews (48% Negative vs 15% platform average), while Sci-Fi and Drama titles were overwhelmingly Positive.

Genre	Reviews	% Positive	% Neutral	% Negative	Avg Rating
Sci-Fi	1,420	71%	22%	7%	4.17
Action	1,290	65%	25%	10%	3.95
Drama	1,100	72%	21%	7%	4.25
Thriller	820	60%	27%	13%	3.88
Romance	380	55%	28%	17%	3.65
Comedy	310	32%	20%	48%	2.68
Documentary	197	68%	24%	8%	4.12

The Comedy Negative review rate (48%) is 3.2x the platform average. Most negative reviews cite weak screenwriting and predictable plots. Exit survey data from abandoned Comedy sessions shows 63% of viewers dropped off within the first 30 minutes — confirming that the problem is content quality, not audience discovery.

8. Audience-Driven Recommendations

1. Target Sci-Fi marketing at 25–34-year-olds (1.5x affinity index) on platforms they index highest: Instagram, YouTube, and Streaming Pre-roll.
2. Develop a Smart TV-first UI experience for Drama content — the 35–54 segment, which favours Drama, has the highest Smart TV usage and the highest completion rates.
3. Introduce a Comedy-specific audience survey to diagnose whether the low ratings reflect content quality, genre fatigue, or targeting mismatch — before any commissioning resumes.
4. Launch a 'Peak Hours' notification feature (push at 7:30 PM) to convert casual Mobile viewers to Smart TV evening sessions, which have 17.8 pp higher completion rates.
5. Build a recommendation algorithm segment for the 45–54 Drama cohort — the highest average rater (4.3/5.0) — to improve content discovery and reduce churn in this high-LTV group.

Data sources: viewers.csv (1,200 records), watch_activity.csv (13,708 events), reviews.csv (5,517 records), regional_performance.csv (1,855 records). Analysis period: January 1 — March 31, 2025. Prepared by the Audience Intelligence Team.
